7 TP-Synthetic Artificial Turf

8 Technical Conditions of Examination to 9 determine microplastic emissions due to 10 wear using the Lisson Tretrad machine

11 Prepared by the Editorial Board of TP-Synthetic Artificial Turf

12 **Draft**

13 **Phase of objection 1st Jun. 2022 until 31st Aug. 2022**

14 15 Notes for the user

16 Technical rules of FLL are freely available for everyone to use. An obligation to apply the rules may
17 result from legal or administrative regulations, contractual agreements or other legal grounds.

18 FLL standard guidelines are the result of cooperative voluntary technical and scientific work. They are
19 considered to be the professional standard by virtue of the principles and rules applied in their prepara-
20 tion.

21 FLL standard guidelines are an important source of knowledge for professional behaviour under normal
22 conditions. However, they are not able to cover all the possible special cases in which more extensive
23 or restrictive measures may be necessary. They are nevertheless a benchmark for proper technical
24 performance. This benchmark is also important in the framework of the legal framework.

25 FLL standard guidelines are to be implemented as 'acknowledged rules of technical practice'.

26 The application of FLL standard guidelines exempts no one from responsibility for their own actions.
27 Each person acts in this respect at their own risk.

28 Anyone who discovers an error or misinterpretation in an FLL rulebook that could lead to incorrect ap-
29 plication is requested to inform the FLL immediately so that any defects may be rectified.

30 Modal auxiliary verbs (e. g. shall, should, must) and their meaningfulness are of particular importance
31 for a clear understanding of the set of rules. DIN 820 refers to 'standardisation work'.
